

APIs in Python

Now we got a model, what's next?

- Making sure our model can predict clubs that are not in the catalog
- Updating model to have out old preferences
- Being able to have different applications communicate with each other
- Refining for different uses cases and testing

Crud Operations

Create	→	POST	} HTTP Methods
Read	→	GET	
Update	→	PUT	
Delete	→	DELETE	

CODING!

https://github.com/stuyai/Python_APis_Intro.git

Brainstorming!

- What operations will we be needing
- How do we maintain memory and context?
